AI IS DISRUPTING INDUSTRIES

Rush Zarrabian, CFA®
Corbett Road
Managing Partner, Portfolio Manager

SUMMARY

- Several industries, led by software, have sold off significantly year to date, as investors assess the impact of artificial intelligence on established business models. While some companies will face genuine pressure, the initial market response is often indiscriminate—pricing in disruption broadly before fully understanding the scope and timing of new innovations. Over time, the market will distinguish between structural losers and firms that successfully adapt and continue to grow.
- While the cap-weighted S&P 500 has stalled due to weakness in Big Tech, capital is rotating into cyclicals, value, and international equities. Improving breadth has historically been constructive for forward returns, and pullbacks at this stage should be viewed in the context of a healthy rotation rather than a market breakdown.
- A positive January has typically been followed by strong full-year performance for equities. When the year started with modest gains (up 1-2%), forward returns were positive in every prior instance.
- Our current **microcast**[™] signal remains at an aggressive allocation, unchanged from last month's stance. Overall, our tactical risk models continue to reflect a constructive outlook for equity markets.

The chart(s)/graph(s) shown is(are) for informational purposes only and should not be considered as an offer to buy, solicitation to sell, or recommendation to engage in any transaction or strategy. Past performance may not be indicative of future results. While the sources of information, including any forward-looking statements and estimates, included in this (these) chart(s)/graph(s) was deemed reliable, Corbett Road Wealth Management, Spire Wealth Management LLC, Spire Securities LLC and its affiliates do not guarantee its accuracy.

CONCERNS ABOUT AI DISRUPTION ARE UPENDING SEVERAL INDUSTRIES

Stocks in several industries have sold off sharply on fears that AI will erode their business models. Software has been the most visible casualty, but the pressure has extended to insurance brokers, commercial real estate providers, and even trucking companies (chart from MarketDesk):

Figure 5: AI Product Launches Spark Industry Selloffs

Source: MarketDesk

The reaction in Software is understandable. These businesses generate high margins and recurring subscription revenue. The durability and visibility of their business models have long justified premium valuations. If AI compresses pricing power, lowers barriers to entry, or shifts value away from incumbent platforms, the economics begin to look less secure. When an industry built on high margins and predictable revenue starts to appear structurally vulnerable, valuation multiples reset quickly, even if the companies themselves remain profitable. It's also worth noting that this rerating didn't start with the latest wave of AI headlines. Software forward price to earnings (P/E) ratios peaked in early 2022 and have been compressing ever since (chart from Bloomberg):

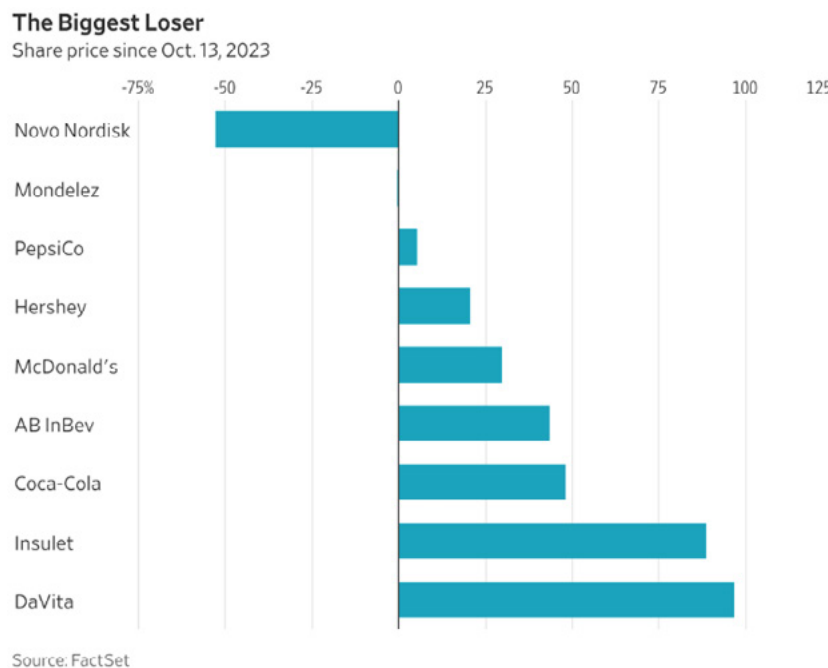

Source: Goldman Sachs, Bloomberg

Investors may be repeating a familiar pattern. When GLP-1 drugs like Wegovy and Zepbound began gaining traction in late 2023, markets quickly priced in second-order effects. Packaged food companies sold off on the assumption that decreased appetite would reduce snacking. Insulin providers and kidney care companies declined as well, given the drugs’ origins in diabetes treatment and early studies pointing to improved kidney outcomes.

The underlying question then (as now) was how much of the perceived disruption would actually materialize, and how quickly.

Reviewing the GLP-1 landscape today, share performance looks very different from the initial reaction and what was expected two years ago. The steepest drawdown has occurred in shares of Novo Nordisk (maker of Wegovy), which have declined nearly 50% from peak. Meanwhile, many of the companies that initially sold off due to “GLP-1 risk” have recovered as the initial pessimism proved excessive.

Markets moved ahead of the data, pricing in disruption before its scale and timing were clear (chart from WSJ):

A similar outcome is not assured with AI. Some business models will face real pressure. Over time, though, markets tend to draw distinctions. Companies that are structurally vulnerable will likely not recover, while those that adapt, protect margins, and continue to grow will regain their footing. The process can be uneven and lead to further volatility, but investors rarely treat all companies within an industry the same indefinitely.

DESPITE SOME DISRUPTION, THE BROADER MARKET REMAINS CONSTRUCTIVE

The stock market, as measured by the S&P 500, has not made much progress since last October. However, this is largely due to the index's outsized exposure to technology stocks, which have recently underperformed, masking steady gains in other sectors (chart from Duality Research):

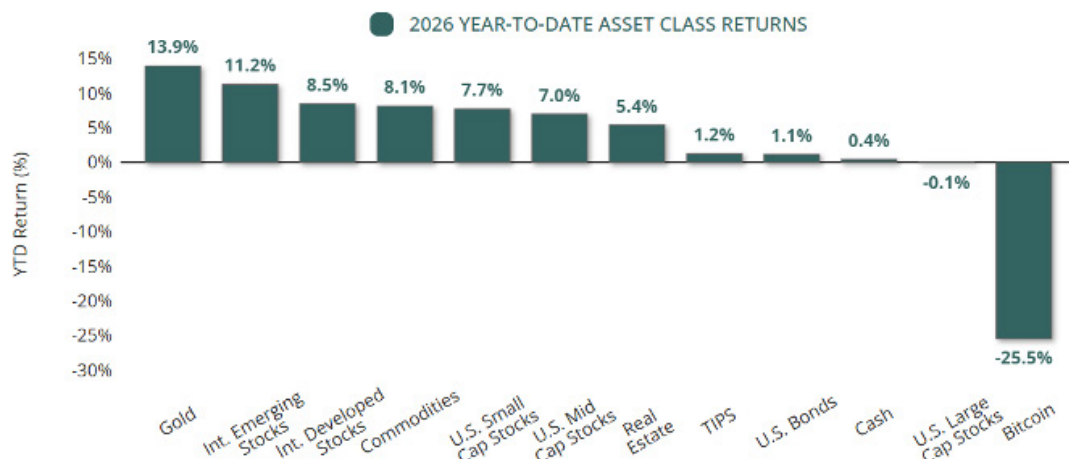

As leadership has shifted away from Big Tech, capital has flowed into cyclicals and value stocks. International equities, both developed and emerging, are again leading the way in 2026 as they did last year (from Exhibit A, data through 2/12/2026):

Asset Class Returns In 2026

Year-to-date (YTD) Returns Of Various Asset Classes in 2026

YTD 2026

Please see important disclosures at the end of this article

Taken together, this resembles a healthy rotation, not a breakdown. Leadership is broadening beyond Big Tech, which reduces the concentration risk that has grown increasingly extreme as these mega-cap tech stocks drove the bulk of the market's gains in recent years.

History supports the idea that improving breadth is constructive. When the average S&P 500 sector was within 2.5% of its 52-week high, forward one-year returns for the index were positive every time (chart from Bespoke):

| S&P 500 Performance When Average Sector w/in 2.5% of 52-Week Highs | | | | | | |
|--|-------------------------|--------------|------------|----------|-----------|-------------|
| Date | S&P 500 Performance (%) | | | | Next Year | |
| | One Month | Three Months | Six Months | One Year | Max Gain | Max Decline |
| 8/23/91 | -2.09 | -4.57 | 4.39 | 5.25 | 7.84 | -4.81 |
| 3/28/95 | 2.15 | 8.10 | 16.27 | 28.78 | 31.27 | -0.63 |
| 12/12/03 | 4.94 | 4.32 | 5.80 | 10.60 | 12.25 | -1.02 |
| 10/14/09 | 0.13 | 5.17 | 10.86 | 7.49 | 11.47 | -6.36 |
| 7/12/16 | 1.48 | -0.60 | 5.50 | 13.53 | 14.27 | -3.11 |
| 11/1/19 | 2.42 | 5.17 | -7.70 | 6.62 | 16.76 | -27.05 |
| 3/11/21 | 4.81 | 7.82 | 13.18 | 6.73 | 21.76 | -1.27 |
| 2/22/24 | 2.89 | 4.32 | 9.51 | 18.21 | 20.78 | -2.36 |
| 1/13/26 | | | | | | |
| Average | 2.09 | 3.72 | 7.23 | 12.15 | 17.05 | -5.83 |
| Median | 2.28 | 4.75 | 7.65 | 9.04 | 15.51 | -2.73 |
| % Positive | 88 | 75 | 88 | 100 | | |

While improving breadth and more diversified leadership are constructive developments for forward returns, pullbacks of 5-10% are still a regular feature of equity markets. On average, the market experiences roughly three declines of at least 5% each year and one decline of 10% or more.

For context, 2025 saw an 18% correction during the April tariff scare, followed by another 5% pullback in November (chart from LPL):

JANUARY BAROMETER POINTS TO, **POSITIVE YEAR FOR STOCKS**

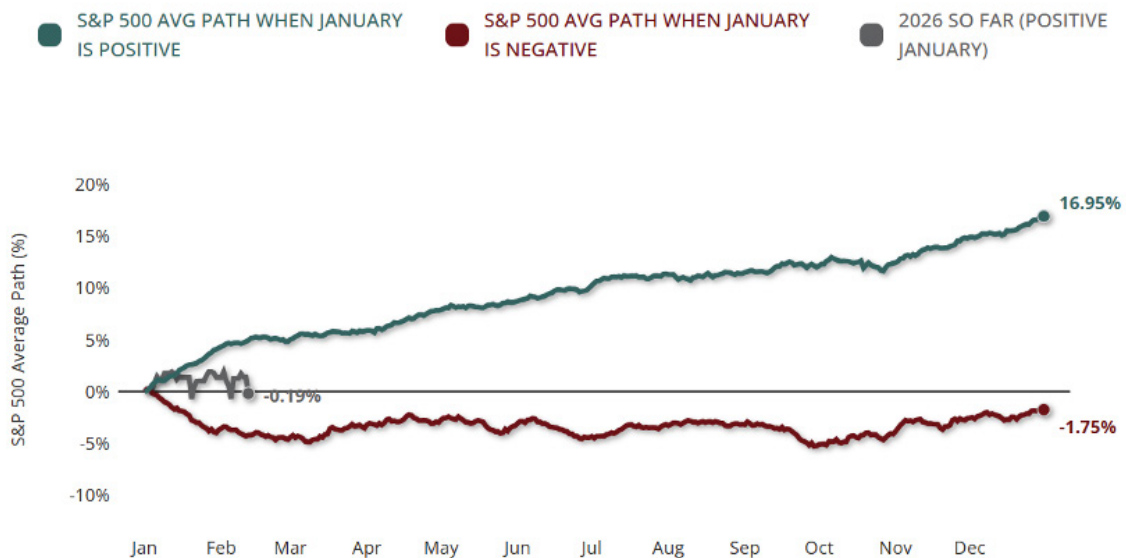

The January Barometer is a stock market theory that suggests January's performance can predict the market's direction for the rest of the year. The phrase "as goes January, so goes the year," sums up this idea.

Comparing the average returns in both scenarios, there is evidence that a positive January has been a reliable market indicator. Historically, when the market was up in January, average returns for the full year were significantly greater than when the year started off with a decline (chart from Exhibit A):

A Historical Look at the "January Barometer" in the S&P 500

Average Path Of The S&P 500 When January Is Positive vs Negative

All Years Since 1950

Furthermore, a modest January gain has historically set a constructive tone for the rest of the year. When the S&P 500 rises between 1% and 2% in January, February through December have seen average returns around 16%. In the 13 prior instances shown, the index finished the year higher each time (chart from Nautilus Research):

S&P 500 January Barometer

| Event Dates | Return | SPX Forward returns after 14 events 12/30/1927 - 1/30/2026 | | | | | | |

Data Source: FactSet 2/2/2026 8:23

That full-year outcome is well above the market's typical annual return of roughly 7%. The path forward, however, was often bumpy with negative returns frequently occurring in the two-to-three months following January. By the six-month mark, returns improved materially, averaging around 7%, with gains in eleven of thirteen cases.

In summary, markets are repricing the potential impact of AI, and that recalibration is driving volatility across multiple industries. While some business models will be challenged, history suggests investors often price in disruption well before its ultimate scale is fully understood. Encouragingly, beneath the surface, breadth is improving and leadership is broadening—developments that have typically supported more durable advances. While pullbacks are normal and should be expected, early-year strength has historically led to further gains. The environment may feel unsettled, but the broader backdrop continues to suggest a positive environment for risk assets.

Use of Indicators

Corbett Road's quantitative models utilize a variety of factors to analyze trends in economic conditions and the stock market to determine asset and sector allocations that help us gauge market movements in the short- and intermediate term. There is no guarantee that these models or any of the factors used by these models will result in favorable performance returns.

Individual stocks are shown to illustrate market trends and are not included as securities owned by CRWM. Any names held by CRWM is coincidental. To be considered for investment by CRWM, a security must pass the Firm's fundamental review process, meet certain internal guidelines, and fit within the parameters of the Firm's quantitative models.

Spire Wealth Management, LLC is a Federally Registered Investment Advisory Firm. Securities offered through an affiliated company, Spire Securities, LLC, a Registered Broker/Dealer and member FINRA/SIPC. Registration does not imply any level of skill or training.
